Experiment 2

Setting Up a Zoho Creator Account and Exploring the Platform Architecture and Interface
Application: Insurance Claim Request & Processing Management

Aim

To create a Zoho Creator account and explore the platform architecture, features and user interface for developing low-code applications.

Theory

Zoho Creator is a cloud-based low-code platform for building custom business applications with a visual development environment. An **application** is the container that holds all forms, reports, pages, workflows and settings. For this lab series the application created is **Insurance Claim Request & Processing Management**.

Platform architecture

Component	Description	Used in the claim application
Applications	Container for forms, reports, pages, workflows and settings	Insurance Claim Request
Forms	Collect and store user data	Claim_Request_Form, Policies_Master
Reports	Display stored data as lists, tables, calendars, charts, etc.	Claim_Request_Report and the nine report types
Pages	Custom interfaces combining many elements into one view	Claims_Command_Center_Page
Workflows	Automate tasks with event-based actions and business logic	Acknowledgement email, reminders, approvals
Deluge Script	Zoho Creator's scripting language for advanced logic	Policy verification, net payable calculation
Users and Permissions	Control who can access which feature or data	Claims Officer, Surveyor, Branch Manager roles

The Creator interface consists of the Home Dashboard, Application Builder, Form Designer, Report Builder, Workflow Builder, Navigation Panel and Settings menu.

Procedure

1 Open a web browser and go to the Zoho Creator website.
2 Create a Zoho account or sign in with existing credentials.
3 Open the Creator home dashboard.
4 Create a new application (blank or from a template) named "Insurance Claim Request".
5 Explore the Application Builder interface.
6 Open the Form Designer and add sample fields such as text, number, date and email.
7 Open the Report Builder and view the generated records.
8 Open the Workflow section to understand the automation features.
9 Explore Pages, Settings, Users and application permissions.
10 Observe the overall platform architecture and note the function of each component.

Output

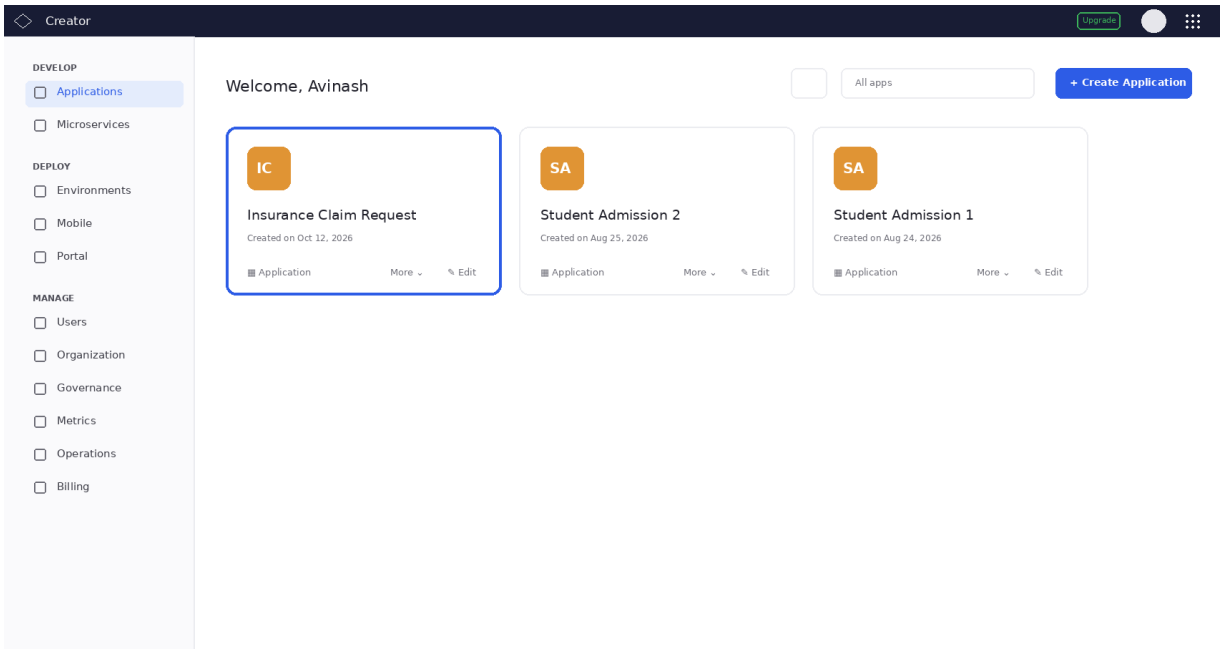

Figure 2.1 – Zoho Creator home dashboard with the Insurance Claim Request application (illustrative screen)

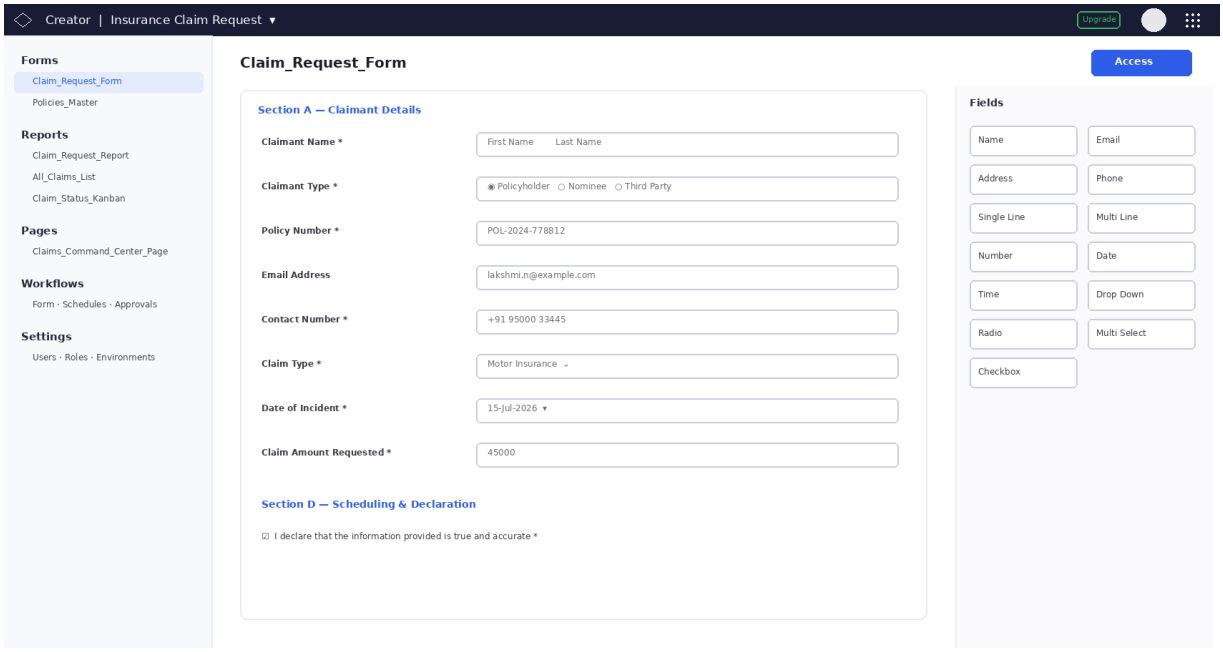

Figure 2.2 – Application Builder showing forms, reports, pages and workflows (illustrative screen)

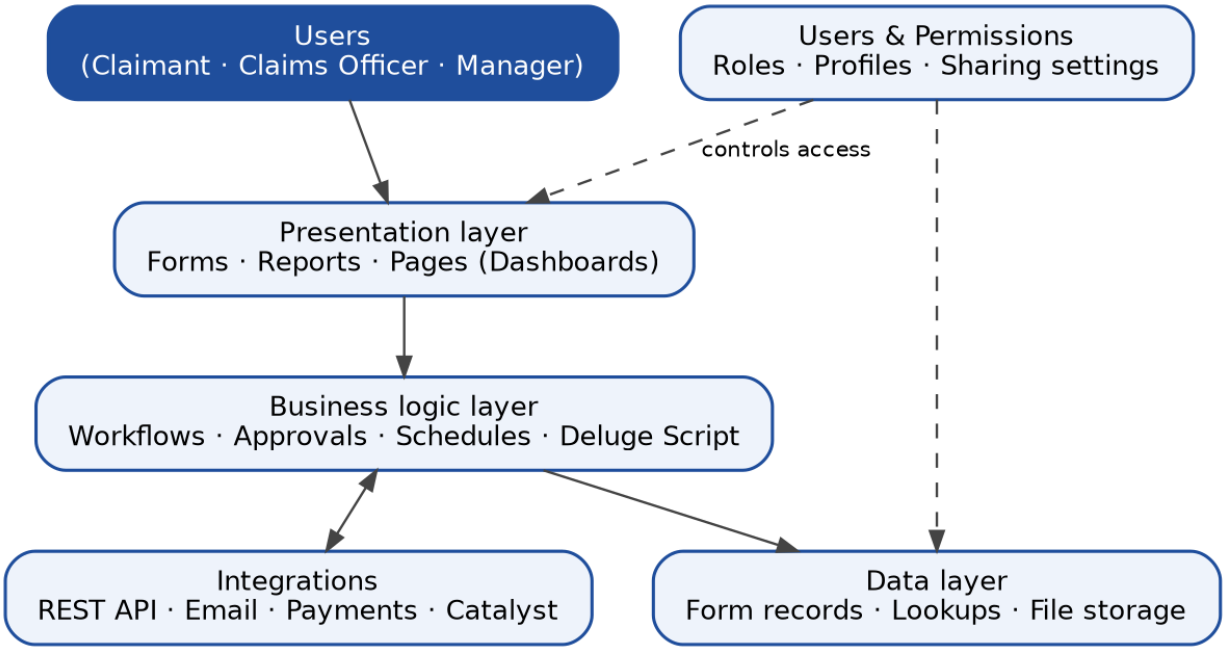

Figure 2.3 – Zoho Creator platform architecture

Result

A Zoho Creator account was created and the platform architecture and interface were explored. The experiment showed that Zoho Creator provides an intuitive low-code environment with forms, reports, workflows, pages and dashboards, enabling rapid application development with minimal programming effort.
