Experiment 5

Insurance Claim Reports Suite – Report Types
Application: Insurance Claim Request & Processing Management

Aim

To design and build a complete suite of Reports in Zoho Creator for the “Insurance Claim Request Form” application, demonstrating the correct usage of all nine Report Types: List, Spreadsheet, Kanban, Calendar, Map, Timeline, Pivot Table, Chart and Summary view.

Reports Used (9 Report Types)

Report Type	Report Name	Purpose	Key Configuration
List View	All_Claims_List	Simple scrollable list of every claim for quick browsing and search	Columns: Claimant Name, Policy Number, Claim Type, Claim Amount Requested, Claim Status; sorted by Date of Incident (descending)
Spreadsheet View	Claims_Spreadsheet	Editable grid for bulk update of investigation and settlement status	Inline-editable: Investigation Status, Surveyor Assigned, Settlement Status; grouped by Claim Type
Kanban View	Claim_Status_Kanban	Draggable cards grouped by processing stage	Grouped by Status: Submitted / Under Investigation / Approved / Settled / Rejected; card shows Claimant Name and Claim Type
Calendar View	Incident_Date_Calendar	Claims on a calendar by date of incident to spot spikes	Based on Date_Of_Incident; each day shows count of incidents
Map View	Claimant_Location_Map	Residential addresses plotted on a map for site-visit planning	Based on Residential_Address (geocoded); pins coloured by Claim Type
Timeline View	Claim_Activity_Timeline	Claim submissions along a time axis to track volume trends	Based on Claim_Submitted_On; grouped by week, showing cumulative claims
Pivot Table	ClaimType_By_ClaimantType_Pivot	Cross-tabulates Claim Type against Claimant Type	Rows: Claim_Type; Columns: Claimant_Type; Values: Count of Claims
Chart View	ClaimType_Distribution_Chart	Pie chart of claims per claim type	Chart type: Pie; Segments: Claim_Type; Values: Count of Claims
Summary View	ClaimType_Amount_Summary	Groups claims by type with total and average amounts for reserve planning	Grouped by Claim_Type; Count, Sum and Average of Claim_Amount_Requested

Report Configuration Details

- **All_Claims_List** – default landing report for the claims team; includes search bar and column filters for Claim Type, Claimant Type and Claim Status; default sort by Date of Incident descending.
- **Claims_Spreadsheet** – only Investigation Status, Surveyor Assigned and Settlement Status are editable; edit permission restricted to the Claims Processing Team role.
- **Claim_Status_Kanban** – dragging a card updates the Status field automatically with a timestamp.
- **Incident_Date_Calendar** – clicking a date drills down into the claims reported that day; dates beyond the current policy period are excluded.
- **Claimant_Location_Map** – Residential Address must be geocode-enabled; helps surveyors plan routes and identify regional hotspots.
- **Claim_Activity_Timeline** – data refreshes daily; helps forecast staffing for high-volume periods.

- **ClaimType_By_ClaimantType_Pivot** – blank cells shown as zero; shows first-party versus third-party claim volume.
- **ClaimType_Distribution_Chart** – auto-refreshes when a new claim is submitted; informs underwriting focus.
- **ClaimType_Amount_Summary** – currency totals in INR (₹) with two decimals; feeds reserve-fund planning.

Supporting Fields Needed by the Reports

Some reports use fields that are not part of the Basic/Advanced field lists. Add them to Claim_Request_Form so that the reports work:

Field	Type	Used by
Status (Submitted / Under Investigation / Approved / Settled / Rejected)	Drop Down	Kanban view, Claim Status column, Command Center board
Investigation_Status	Drop Down	Claims_Spreadsheet
Surveyor_Assigned	Single Line or Lookup	Claims_Spreadsheet
Settlement_Status	Drop Down	Claims_Spreadsheet
Policy_Deductible	Currency	Net_Payable_Amount formula (Exp 4B)

Procedure

1. Open the Insurance Claim Request application and make sure Claim_Request_Form has some sample records (at least 8–10, with different claim types, dates and claimant types).
2. Click **+ Create New → Report** and choose the base form **Claim_Request_Form**.
3. Select the report type from the report-type selector.
4. Name the report exactly as given in the table.
5. Configure columns, grouping, sorting and filters as per the key configuration.
6. Apply the access and validation rules (permissions, refresh, formatting).
7. Save and open each report in Access mode.
8. Perform one interaction (drag a Kanban card or click a calendar date) and capture before/after screenshots.

Workflow Summary

1. Claimants submit claims through Claim_Request_Form.
2. The claims manager monitors incoming claims using All_Claims_List and Claim_Activity_Timeline.
3. Staff track progress using Claim_Status_Kanban.
4. Surveyors plan site visits with Claimant_Location_Map.
5. The fraud-analysis team uses Incident_Date_Calendar to flag unusual clustering of incidents.
6. Senior management reviews the Pivot table and the Chart in planning meetings.
7. Finance uses ClaimType_Amount_Summary for reserve planning; the claims team updates statuses in bulk using Claims_Spreadsheet.

Output (Screenshots)

(1) List View – All_Claims_List

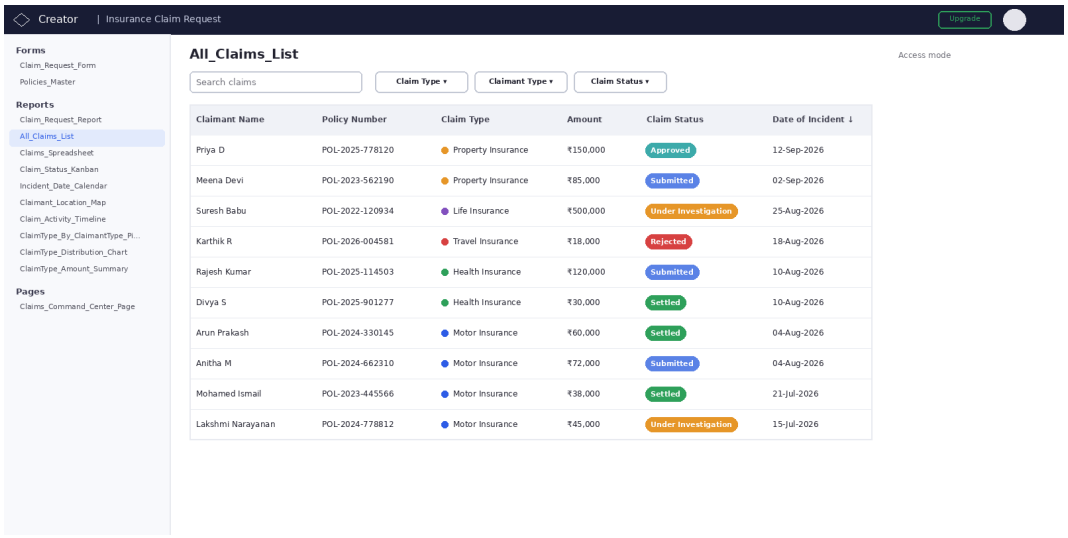

Figure 5-1 – (1) List View – All_Claims_List (reference mockup)

(2) Spreadsheet View – Claims_Spreadsheet

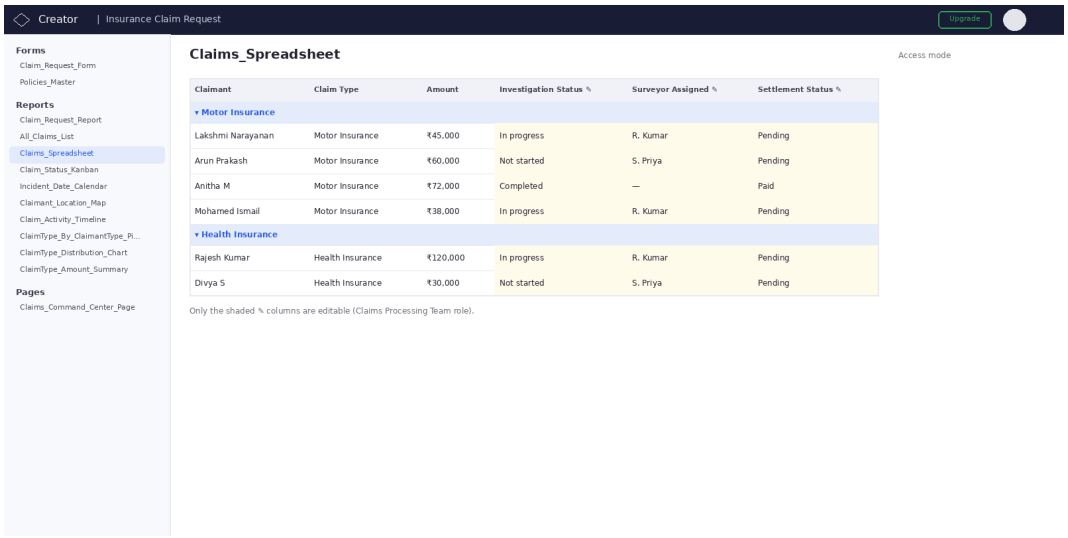

Figure 5-2 – (2) Spreadsheet View – Claims_Spreadsheet (reference mockup)

(3) Kanban View – Claim_Status_Kanban

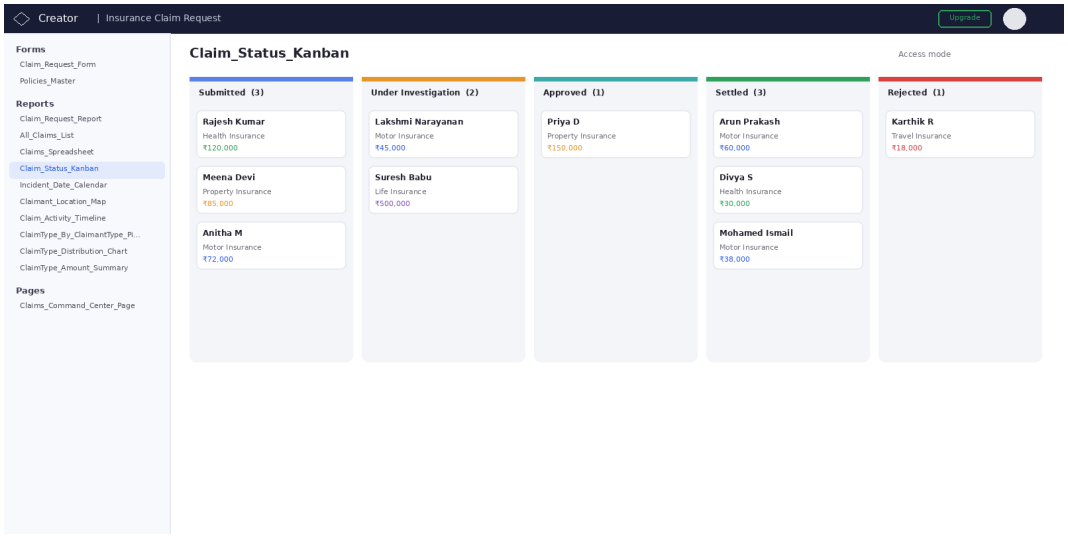

Figure 5-3 – (3) Kanban View – Claim_Status_Kanban (reference mockup)

(4) Calendar View – Incident_Date_Calendar

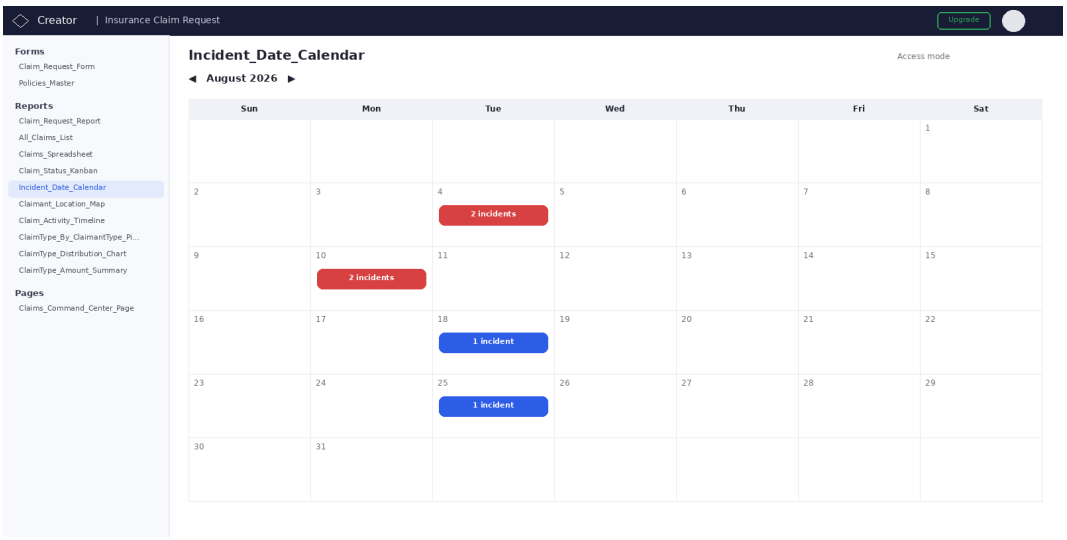

Figure 5-4 – (4) Calendar View – Incident_Date_Calendar (reference mockup)

(5) Map View – Claimant_Location_Map

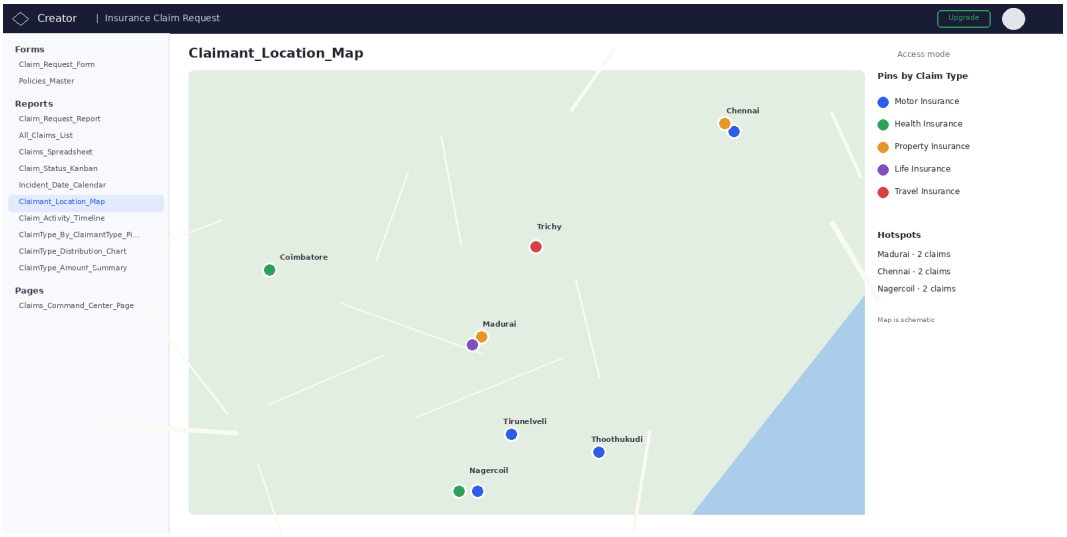

Figure 5-5 – (5) Map View – Claimant_Location_Map (reference mockup)

(6) Timeline View – Claim_Activity_Timeline

Figure 5-6 – (6) Timeline View – Claim_Activity_Timeline (reference mockup)

(7) Pivot Table – ClaimType_By_ClaimantType_Pivot

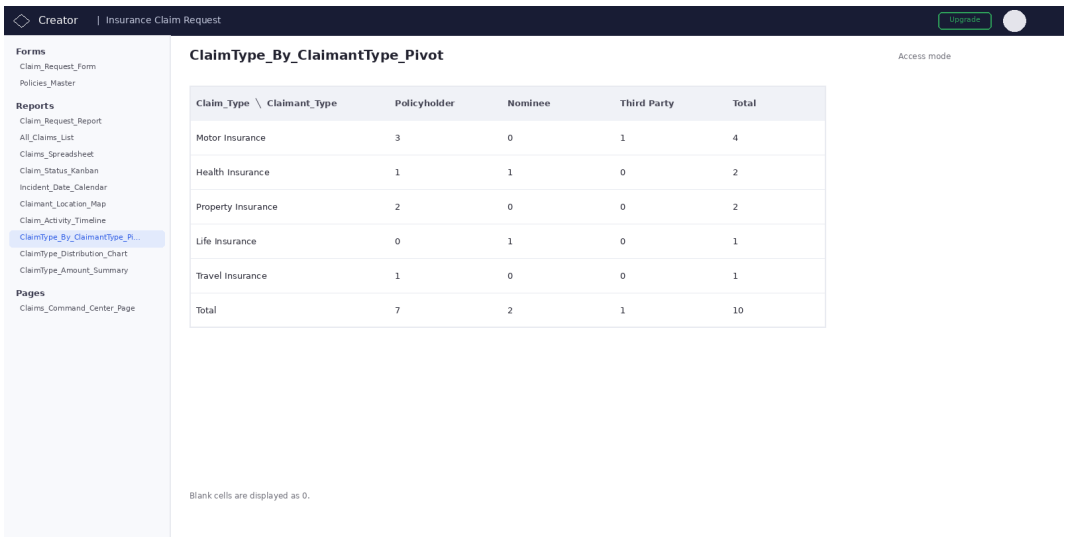

Figure 5-7 – (7) Pivot Table – ClaimType_By_ClaimantType_Pivot (reference mockup)

(8) Chart View – ClaimType_Distribution_Chart

Result

A complete suite of nine reports covering List, Spreadsheet, Kanban, Calendar, Map, Timeline, Pivot, Chart and Summary views was built on Claim_Request_Form so that each stakeholder has a purpose-built view of the claims data.
