Experiment 6A

Insurance Claim Command Center – Page Elements
Application: Insurance Claim Request & Processing Management

Aim

To design and build a single internal “Command Center” Page in Zoho Creator for the existing “Insurance Claim Request” application, demonstrating the correct usage of all eleven Page Builder elements – Panel, Board, Chart, Gauge, Search, Form, Report, Snippets, Button, Widgets and Viewer – so that the claims team has one unified workspace to monitor, manage and act on claims data.

Page Details

Item	Value
Application	Insurance Claim Request & Processing Management
Page Name	Claims_Command_Center_Page
Primary Users	Claims Processing Team, Surveyors, Branch Manager
Underlying Form / Reports	Claim_Request_Form, Claim_Request_Report, ClaimType_Distribution_Chart

Page Elements Used (all 11 Page Builder elements)

Element	Element Name	Purpose	Placement
Panel	Command_Center_Main_Panel	Primary structural container grouping all elements	Wraps the entire page
Board	Claim_Status_Board	Kanban-style board; drag claims between stages	Central column: Submitted, Under Investigation, Approved, Settled, Rejected
Chart	ClaimType_Distribution_Chart_Widget	Live claim counts per claim type (pie)	Top-right, next to the Gauge
Gauge	Monthly_Settlement_Target_Gauge	Progress towards the monthly settlement target	Top-left, first element seen
Search	Claim_Search_Bar	Look up a claim by claimant name, policy number or claim reference ID	Fixed at the top, above the Board
Form	Quick_Counter_Claim_Intake_Form	Embeds Claim_Request_Form for counter staff	Right-hand panel, tab or expandable section
Report	Full_Claims_Report	Embeds Claim_Request_Report for row-level review and export	Lower section, below the Board
Snippets	Claim_Process_Guidelines_Snippet	Reusable claim-process steps and required documents	Sidebar
Button	Send_Document_Reminder_Button	One-click reminder e-mails to claimants with missing documents	Directly above the Board
Widgets	Surveyor_And_Reserve_Widgets	Surveyor availability and reserve-fund status	Bottom strip, below the report
Viewer	Claim_Document_Viewer	Inline viewer for the FIR copy or repair estimate	Sidebar, below the Snippet

Page Layout (Section-wise)

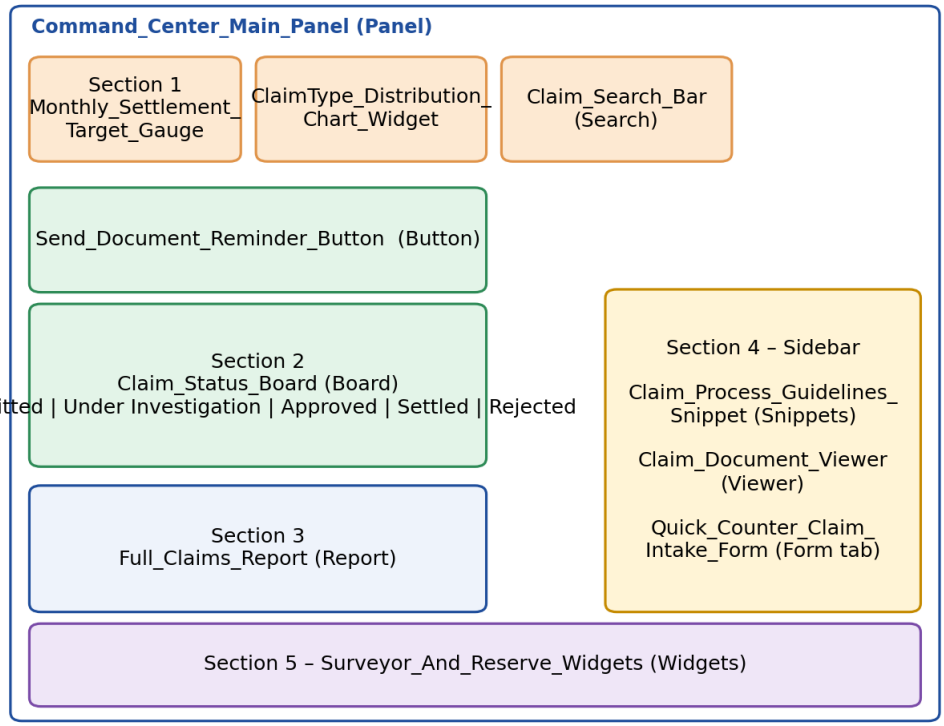

Figure 6.1 – Wireframe of Claims_Command_Center_Page

Section	Elements
1 – Overview Strip	Monthly Settlement Target Gauge · ClaimType Distribution Chart · Claim Search Bar
2 – Processing Workspace	Send Document Reminder Button · Claim Status Board
3 – Detailed Data	Full Claims Report
4 – Reference & Quick Actions (Sidebar)	Claim Process Guidelines Snippet · Claim Document Viewer · Quick Counter Claim Intake Form (expandable tab)
5 – Operations Strip	Surveyor Availability and Reserve Fund Widgets

Configuration & Access Rules

- **Panel:** role-based visibility – only claims-team and branch-manager accounts can access the page.
- **Board:** each column mapped to a value of the Status field; dragging a card updates the record instantly.
- **Chart:** auto-refresh at a fixed interval so the manager always sees the current claim-type mix.
- **Gauge:** monthly target configurable; colour changes (red to green) as settled claims approach the target.
- **Search:** searches Claimant Name, Policy Number and Claim Reference ID simultaneously.
- **Form:** same validation rules as the standard Claim_Request_Form.
- **Report:** export-to-Excel restricted to branch-manager accounts.
- **Snippets:** centrally managed – any edit appears everywhere the snippet is reused.
- **Button:** triggers a workflow that e-mails only claimants whose claims are flagged with missing documents.
- **Widgets:** surveyor availability refreshes in real time; reserve-fund widget shows the branch's current financial exposure.
- **Viewer:** always shows the latest uploaded FIR copy or repair estimate without manual link updates.

Procedure

1 Open the Insurance Claim Request application and create a new **Page** named Claims_Command_Center_Page.
2 Drag a **Panel** onto the canvas as the outer container.
3 Add the **Gauge** and **Chart** (Section 1) and the **Search** bar at the top.
4 Add the **Button** and the **Board** (Section 2) and map Board columns to the Status field.
5 Add the **Report** below the Board (Section 3).
6 Add the **Snippets**, **Viewer** and **Form** elements in the sidebar (Section 4).
7 Add the **Widgets** strip at the bottom (Section 5).
8 Set role-based access for the page and save.
9 Open the page in Access mode and test each element with sample data.

Workflow Summary

1 A claims team member opens the page and sees the Gauge and Chart for a quick status check.
2 To find a claim, they use the Claim Search Bar.
3 As investigation proceeds, staff drag cards across the Claim Status Board.
4 For claims missing documents, staff click the Send Document Reminder Button.
5 For walk-in or phone claims, counter staff use the Quick Counter Claim Intake Form.
6 For deeper analysis or export, the branch manager scrolls to the Full Claims Report.
7 For queries, staff refer to the Guidelines Snippet, check the Surveyor widget and open the Claim Document Viewer.

Output (Screenshots)

(a) Full page in the Page Builder editor with all elements labelled

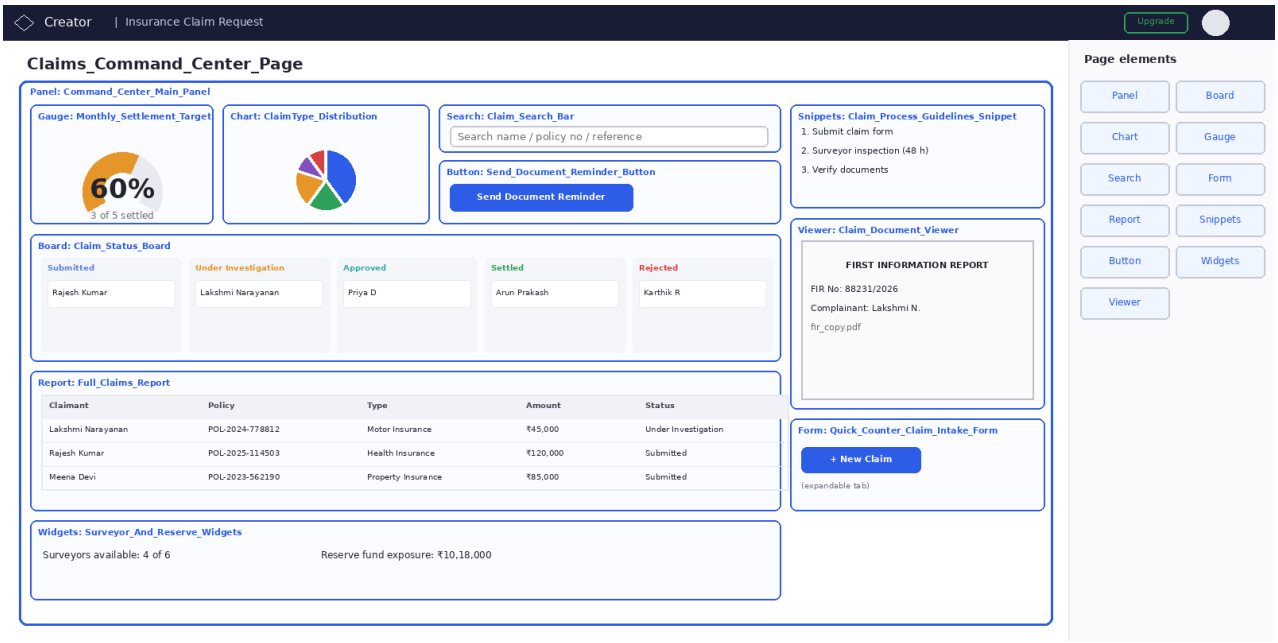

Figure 6A-1 – (a) Full page in the Page Builder editor with all elements labelled (reference mockup)

(b) Gauge and Chart showing live sample data

Result

A single internal “Command Center” page was built in Zoho Creator for the Insurance Claim application using all eleven Page Builder elements, giving the claims team one workspace to monitor, search, process and act on claims.

Experiment 6B

Insurance Claim Automation – Workflow Options
Application: Insurance Claim Request & Processing Management

Aim

To design and build a complete automation layer in Zoho Creator for the existing “Insurance Claim Request” application, demonstrating the correct usage of all eight Workflow options – Form Workflows, Schedules, Approvals, Payments, Blueprints, Batch Workflows, Report Workflows and Functions.

Workflow Options Used (all 8)

Workflow Option	Workflow Name	Behaviour
Form Workflow	On_Claim_Submit_Workflow	Fires when a record is added to Claim_Request_Form. Sends an acknowledgement e-mail with the Claim_Reference_ID and next steps to the claimant, and notifies the claims team for triage.
Schedule	Daily_Pending_Document_Reminder_Schedule	Runs automatically every morning. Finds claims flagged “documents missing” for more than 48 hours and e-mails the claimant a checklist of the documents still required (FIR copy, repair estimate, bills).
Approval	High_Value_Claim_Approval	Claims above a configured amount (for example ₹1,00,000) need approval from the Branch Manager before the status can move to Approved. Smaller claims bypass this step.
Payments	Policy_Excess_Payment_Workflow	Uses a payment-gateway connection to send a secure payment link for any policy excess / deductible payable by the claimant. On success, Excess_Paid_Status is set to “Paid” and the transaction reference is stored; on failure the record is flagged for follow-up.
Blueprint	Claim_Lifecycle_Blueprint	Defines the stages Submitted → Document Verification → Under Investigation → Approved → Settled / Rejected. Each transition is limited to specific roles, so a front-desk user cannot mark a claim Settled without the earlier stages being completed.
Batch Workflow	Bulk_Settlement_Notification_Batch	At the end of each settlement cycle, notifies all newly settled claimants at once with a settlement letter. Processes records in batches so that large volumes do not time out.
Report Workflow	OnEdit_Recalculate_NetPayable_Workflow	When staff edit Depreciation_Percent or Estimated_Repair_Cost directly in a report grid, Net_Payable_Amount is recalculated so that it stays accurate without resubmitting the form.
Function	Generate_Settlement_Letter_Function	A reusable Deluge function that creates the settlement letter. Called automatically when a claim becomes Settled, manually by a “Resend Settlement Letter” button, and by the batch workflow.

Procedure

1 Open the Insurance Claim Request application and go to the **Workflows** section.
2 Create the **Form Workflow** on Claim_Request_Form (On Create → On Success) to send the acknowledgement e-mail.
3 Create the **Schedule** with a daily recurrence and criteria for claims with missing documents.
4 Configure the **Approval** with the Branch Manager as approver and the amount threshold as criteria.
5 Configure **Payments** with a payment-gateway connection and map the excess amount field.
6 Create the **Blueprint** with the claim stages, transitions and role restrictions.
7 Create the **Batch Workflow** for bulk settlement notifications.
8 Create the **Report Workflow** (On Edit) to recalculate Net_Payable_Amount.

9 Write the reusable **Function** Generate_Settlement_Letter_Function and call it from the other workflows.

10 Test each workflow with sample claims and verify e-mails, approvals and stage changes.

Automation Flow
