Experiment 7

API Integration with Zoho Creator
Application: Insurance Claim Request & Processing Management

Aim

To integrate Zoho Creator with external applications and services using Application Programming Interfaces (APIs) to enable secure data exchange, automate business processes and extend the functionality of the Insurance Claim Request & Processing Management system.

Introduction

API integration allows Zoho Creator to exchange data with external systems. Through the **Zoho Creator REST API** external applications can read and write claim records, and through Deluge's **invokeUrl** task the Creator application can call external services such as a policy verification system. This experiment integrates the Insurance Claim application with an external policy-verification API and also reads claim records through the Creator REST API.

Procedure

1 Log in to Zoho Creator and open the Insurance Claim Request application.
2 Identify the external service to integrate – a policy verification API.
3 Configure API access and authentication (OAuth token / API key stored in a Connection).
4 Generate the credentials and set the required scopes (for example ZohoCreator.report.READ).
5 Use Deluge **invokeUrl** to send and receive data.
6 Configure the request URL, HTTP method, headers and parameters.
7 Test the integration and verify that data is exchanged correctly.
8 Handle errors and validate the response so that failures are reported to the claims team.

Sample Deluge code

```
headerMap = Map();
headerMap.put("Authorization","Bearer " + API_TOKEN);
response = invokeUrl
[
    url :"https://api.example-insurer.com/v1/policies/" + input.Policy_Number
    type :GET
    headers:headerMap
];
if(response.get("status") == "ACTIVE")
{
    input.Policy_Status = "Verified";
}
else
{
    alert "Policy not active - please check the policy number";
}
```

Note: api.example-insurer.com is a placeholder; replace it with your real service URL.

Output

Deluge Script Editor — On_Claim_Submit_Verify_Policy (Form Workflow → On Success)

```
// Verify policy with an external Policy Verification API (placeholder URL)
headerMap = Map();
headerMap.put("Authorization","Bearer " + API_TOKEN);

response = invokeUrl
[
    url :"https://api.example-insurer.com/v1/policies/" + input.Policy_Number
    type :GET
    headers:headerMap
]
info response;

if(response.get("status") == "ACTIVE")
{
    input.Policy_Status = "Verified";
    sendmail [ from :zoho.adminuserid  to :input.Email_Address
               subject :"Claim " + input.Claim_Reference_ID + " received"
               message :"Your policy is verified. Our surveyor will contact you." ]
}
else
{
    input.Policy_Status = "Verification Failed";
    alert "Policy not active — please check the policy number";
}
```

Output / Response (info response)

```
{
  "policy_number": "POL-2024-778812",
  "holder": "Lakshmi Narayanan",
  "cover_type": "Comprehensive",
  "sum_insured_lakhs": 5.50,
  "valid_till": "31-Mar-2027",
  "status": "ACTIVE"
}
```

Execution Log

```
[OK] invokeUrl GET  → HTTP 200
[OK] policy status = ACTIVE
[OK] Policy_Status set to "Verified"
[OK] Acknowledgement mail queued
Record: INS-CLM-2026-000384
```

REST client — Zoho Creator REST API v2.1 (Get Records)

GET `https://creator.zoho.in/api/v2.1/{account_owner}/insurance-claim-request/report/Claim_Request_Report` Send

Headers: Authorization: Zoho-oauthtoken <access_token> Scope: ZohoCreator.report.READ

Status: 200 OK Time: 412 ms

```
{
  "code": 3000,
  "data": [
    { "ID": "4452530000000112001",
      "Claim_Reference_ID": "INS-CLM-2026-000384",
      "Claimant_Name": { "first_name": "Lakshmi", "last_name": "Narayanan" },
      "Claim_Type": "Motor Insurance",
      "Claim_Amount_Requested": "45000",
      "Status": "Under Investigation" },
    { "ID": "4452530000000112002",
      "Claim_Reference_ID": "INS-CLM-2026-000385",
      "Claim_Type": "Health Insurance",
      "Claim_Amount_Requested": "120000",
      "Status": "Submitted" }
  ]
}
```

Applications of API Integration

- Connecting Zoho Creator with external databases and applications.
- Sending automated email notifications.
- Synchronising claim and policy records.
- Integrating payment gateways and document-verification services.
- Retrieving external data for reports and dashboards.

Result

API integration in Zoho Creator enables seamless communication between the claim application and external services. With proper authentication, validation and error handling, the Insurance Claim application became more flexible, connected and efficient.
