Experiment 11

Application Deployment and Migration
Application: Insurance Claim Request & Processing Management

Aim

To deploy and migrate the Insurance Claim Request application in Zoho Creator from a development environment to a production environment while maintaining its forms, reports, workflows and data.

Procedure

1 Log in to Zoho Creator and open the Insurance Claim Request application.
2 Prepare the application: verify all forms, reports, pages, Deluge scripts and workflows.
3 Test claim registration, status updates, e-mail notifications and report calculations.
4 Back up data: export the required application data before migration.
5 Package the application using the available deployment or export options.
6 Deploy the application: move it from Development to Stage and then Production using the Environments feature.
7 Configure dependencies: user permissions, connections, e-mail settings and other configurations.
8 Validate the deployment by testing the application in the target environment.
9 Complete the migration and confirm everything is available before switching users.

Output – Environments and Deployment Flow

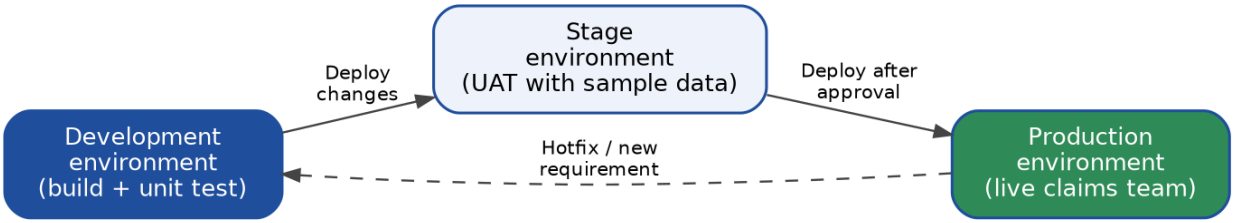

Figure 11.1 – Development, Stage and Production environments

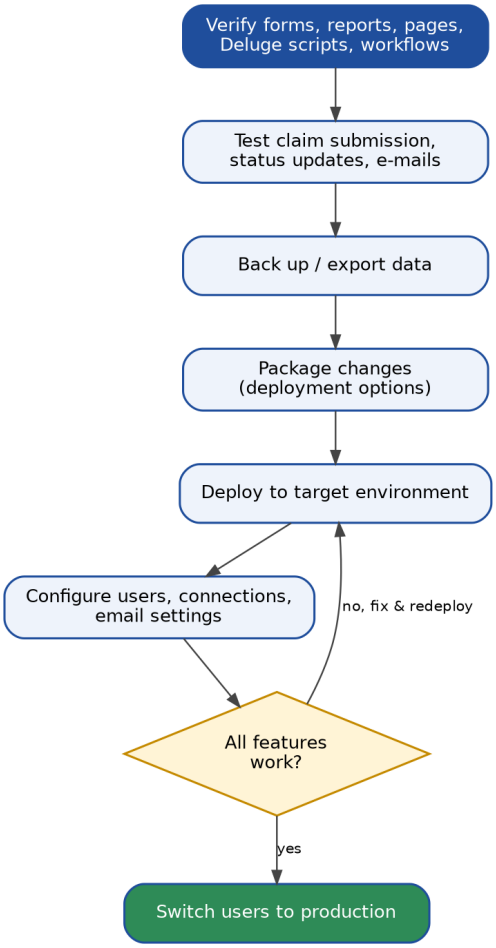

Figure 11.2 – Deployment and migration steps

Result

Deployment and migration were completed successfully when the Insurance Claim application and its required configurations operated correctly in the target environment.
