Experiment 13

Limitations of Low-Code Development Platforms
Application: Insurance Claim Request & Processing Management

Aim

To study and analyse the limitations of low-code development platforms using Zoho Creator, focusing on customization, performance, scalability, integration, security, cost and platform dependency, and to identify possible solutions for overcoming them.

Limitations of Low-Code Platforms and Possible Solutions

Limitation	Description (with claim-app view)	Solution
Limited customization	Predefined layouts and components restrict fully custom UI and behaviour.	Use custom pages, widgets and Deluge scripting where available.
Performance	Many records, workflows and calculations can slow the app.	Optimise Deluge, filter records, retrieve only required data.
Scalability	Limits on storage, API calls, workflow executions and concurrent use.	Review platform limits, monitor usage, upgrade plan or use external services.
Integration	Not every external service or legacy system is supported directly.	Use APIs, webhooks and connectors with secure data exchange.
Platform dependency (vendor lock-in)	Apps rely on platform-specific features and Deluge scripts, so migration is hard.	Keep documentation, back up data, evaluate migration needs early.
Cost and usage limits	Plans limit users, storage, automation and integrations.	Estimate future needs and choose a suitable plan.
Security and compliance	Wrong permission settings can expose confidential claim data.	Use RBAC, restrict sensitive fields, validate inputs, review audit logs.
Limited offline access	Cloud apps depend on internet connectivity.	Check offline options and keep alternate procedures.
Advanced technologies	Specialised algorithms and heavy computation need extra development.	Use supported integrations or pro-code (Catalyst) extensions.

Procedure

1 Study the capabilities of Zoho Creator while building the claim application.
2 Identify points where the platform restricted customization, performance, integration or scalability.
3 Record each limitation and a possible solution.
4 Prepare the analysis and conclusion.

Output – Limitations and Mitigation Map

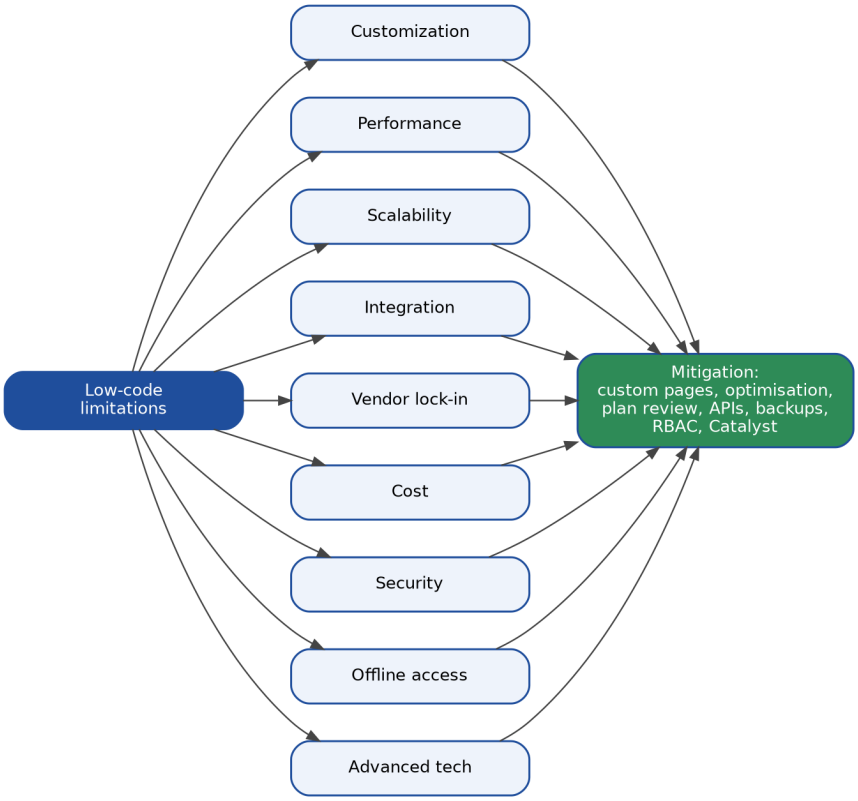

Figure 13.1 – Limitations of low-code platforms and their mitigation

Conclusion

Platforms such as Zoho Creator reduce coding effort and speed up delivery of forms, reports, workflows and dashboards. However, limitations in customization, performance, scalability, integration, platform dependency, cost, security, offline access and advanced technologies must be considered during planning and implementation.
